🛡 Military Status: Educational Exemption

Data Analyst with 2+ years of experience in business analysis, digital performance analytics, and market research, with a track record of cutting reporting cycles by over 60% and scaling dashboards across 10+ teams. Growing into AI-enabled product work — evaluating and helping shape AI-powered features, collaborating on automation workflows, and independently building an end-to-end LLM-based analytics application (FastAPI, LangChain, LangGraph, Langfuse). B.Sc. in Computer Engineering, currently pursuing an M.Sc. in Management Information Systems with a seminar focused on ML-driven user-behavior prediction.

Skills

Programming & Query Languages

- Python
- SQL (SQL Server, MySQL)

Data Analysis

- Exploratory Data Analysis (EDA)
- Data Cleaning
- KPI Design & Reporting
- Customer Segmentation (RFM)
- Cohort Analysis
- Campaign Performance Analysis
- Market Research & Competitor Analysis
- Data Storytelling

AI & LLM Applications

- AI-assisted Data Analysis
- LLM-based Analytics Workflows
- Prompt Design & Evaluation
- LangChain
- LangGraph
- Langfuse
- Structured LLM Output & Guardrails

Visualization & Reporting Tools

- Google Sheets (advanced)
- Looker Studio
- Excel
- Power BI

Business & Product

- Requirements Gathering
- Product & Feature Analysis
- KPI Framework Design
- Stakeholder Communication
- Cross-functional Collaboration

Data Extraction & Automation

- REST APIs / API Data Extraction
- Web Scraping
- FastAPI
- n8n Workflow Automation
- Git

Professional Experience

Mar 2025 – Present

RahbarBazaar

Data Analyst | Product & AI Initiatives

Digital Analytics & Reporting

- **Established the digital analytics function** by defining KPI frameworks, reporting structures, and data flows across social, web, and search channels.
- **Built end-to-end reporting workflows** using Python, APIs, web scraping, Excel/Google Sheets, and Looker Studio to support campaign analysis and management reporting.
- **Introduced AI-assisted sentiment analysis** into recurring reporting workflows, replacing largely manual classification and significantly reducing analysis turnaround time.
- Collaborated with research and business teams to translate campaign objectives and stakeholder requirements into structured analytical frameworks and actionable insights.

Product & AI Initiatives

- Conduct competitive pricing and market analysis for a portfolio of **AI-enabled products**, supporting product positioning and commercial decisions.
- Evaluate product functionality across web and application experiences, identify usability and workflow issues, and contribute to discussions around **new features and product improvements**.
- Contribute to KPI definition and product-performance analysis while collaborating with technical teams on **AI-enabled workflows and n8n-based automation**.
- Contribute to evaluation and development discussions for AI-powered use cases, including AI-assisted form creation, market-intelligence reporting, speech/video transcription, and retail shelf analysis.

Tech Stack: Python, SQL, Excel, Google Sheets, Looker Studio, APIs, Web Scraping, n8n, AI/LLM Tools

Jan 2024 – Mar 2025

Digikala
Market Research Data Analyst (BI & Reporting Focus)

- Built and maintained analytics dashboards in Google Sheets used by **60+ users across 10+ teams and 5+ product categories**, reducing reporting cycles from 2–3 weeks to under one week.
- Automated competitor monitoring through **Python-based web scraping and scheduled data updates**, replacing manual collection and improving visibility into pricing and promotional changes.
- Cleaned, merged, and transformed multi-source marketing and competitor datasets using **Python (pandas), SQL, Excel, and Google Sheets** to support recurring reporting and analysis.
- Wrote SQL queries using **joins, CTEs, and aggregations** for market research, KPI tracking, campaign analysis, and cross-functional reporting.
- Combined survey data, customer feedback, competitor intelligence, and market trends to provide insights on **category performance, positioning, and campaign planning**.
- Collaborated with marketing, strategy, and product teams to translate business questions into KPIs, dashboards, and analytical outputs.

Tech Stack: Python, SQL, Excel, Google Sheets, Web Scraping

Education

Sep 2024 – Present

M.Sc. in Management Information Systems
Shiraz University

Seminar: Application of Machine Learning Models in Digital User Behavior Analysis for Predicting Engagement and Customer Retention

Sep 2018 – Jul 2022

Bachelor of Computer Engineering
University Of Isfahan

Certifications

Data Analysis with Python 	Advanced SQL 
Exploratory Data Analysis (SQL) 	MySQL & Database Fundamentals 
Data Cleaning Techniques 	Data Analysis in Excel 
Git & Version Control 	

Projects

AI-Powered Business Performance Analyst

Built an end-to-end analytics application for campaign-performance data using Python, pandas, FastAPI, LangChain, LangGraph, Langfuse, OpenRouter, and Streamlit. Implemented deterministic KPI calculation, period comparison, change detection, business-impact prioritization, structured LLM summaries, application-level guardrails, observability, and automated testing.

RFM & Cohort Analysis — Customer Retention

Performed RFM segmentation and cohort retention analysis on e-commerce transaction data using Python and pandas, identifying high-value customer segments and retention patterns. Visualized results to support customer-retention analysis and business recommendations.

Predictive Analytics Pipeline — Football Match Data

Built a predictive analytics pipeline using scraped football match data, covering data collection, cleaning, feature preparation, modeling, and evaluation across multiple leagues using Python and machine-learning models.
